ABSTRACT

SMK Ma'arif NU 01 Bantarkawung is a secondary school that still uses a conventional system for its school payments process. This can lead to various problems such as delays in registration, data errors and a lack of transparency for parents. To address these issues, this study developed a website-based school payment information system integrated with WhatsApp Gateway using the Yii framework. Test results showed that all system functions performed as required, with a user satisfaction rating of 78.32%. This demonstrates that the system can increase effectiveness, reduce the risk of recording errors, and simplify the payment administration process for students, parents and the school.
